SUMMARY

Software Engineering student with strong foundations in AI-driven software systems, quality assurance workflows, and backend development. Experienced in Python, machine learning, anomaly detection, log analysis, and scalable data processing. Skilled in debugging, experimentation, structured data handling, and automation workflows using Git, REST APIs, and CI/CD concepts. Passionate about applying AI and automation to improve software quality, testing efficiency, and system reliability.

EDUCATION

Vellore Institute of Technology, Vellore Integrated M.Tech in Software Engineering	2022 – Present CGPA: 8.54/10
Sri Chaitanya College, Hyderabad Intermediate Education	2020 – 2022 96.5%
Sri Chaitanya School, Hyderabad SSC	2019 – 2020 100%

TECHNICAL SKILLS

Programming	Python, Java, C++, SQL
AI & ML	Scikit-learn, Predictive Analytics, Anomaly Detection, Prompt Engineering
Software Engineering	OOP, SDLC, Debugging, Unit Testing, REST APIs, CI/CD Basics
QA & Automation	Log Analysis, Defect Analysis, Test Automation Concepts, Experimentation
Tools & Platforms	Git, GitHub, GitHub Actions, AWS, MongoDB, GCP
Libraries & Web	NumPy, Pandas, HTML, CSS, JavaScript
Soft Skills	Problem Solving, Communication, Collaboration, Documentation

PROJECTS

Gen-AI Log Analyzer (LLM-Powered Full Stack System) Developed an AI-powered log analysis platform for automated failure detection, debugging, and anomaly identification using Python and machine learning workflows. Built structured log parsing and scalable backend pipelines for processing large-scale datasets (50MB+ logs), improving debugging efficiency and supporting AI-assisted defect analysis concepts.	GitHub
AI-Powered Predictive Maintenance System for Industrial Machine Failure Prediction Built a machine learning-based predictive maintenance platform to identify potential industrial equipment failures from operational datasets using Python, Pandas, and Scikit-learn. Developed preprocessing pipelines, feature engineering workflows, and evaluation models to improve prediction reliability and automate analytical experimentation processes.	GitHub
Network Traffic Anomaly Detection using Machine Learning Developed a machine learning-based intrusion detection system using Random Forest on the NSL-KDD dataset, achieving 85% classification accuracy. Processed and analyzed 100K+ network traffic records through preprocessing, feature engineering, and anomaly detection workflows focused on security monitoring and abnormal behavior identification.	GitHub

COURSEWORK

Data Structures and Algorithms, Operating Systems, Computer Networks, Database Management Systems, Software Engineering, Machine Learning, Object-Oriented Programming

EXTRA-CURRICULAR ACTIVITIES

- Student Coordinator – Riviera Cultural Fest (2023)
- Technical Coordinator – graVITas Technical Fest (2024)
- Board Member – Rotaract Club of VIT (2025–2026)
